

Douaneverklaring

## To whom it may concern

Name:

Date:

The above mentioned person is suffering from diabetes mellitus and needs treatment with insulin. Therefore he/she should have permission to take insulin with him/her in the hand luggage and should have permanent access to the insulin.

In case the patient needs to measure the blood glucose level, which is necessary in case he/she doesn't feel well or before a meal, use of the glucose measurement device should be permitted.

When glucose levels are low (hypoglycaemia, a medical urgency) a glucosecontaining beverage should be available.

Name(s) of the insulin pen(s) used:

Name(s) of the insulin(s) used:

Name of insulin pump used:

Name of glucose measurement device:

We assume that this information will be sufficient to permit our patient to take insulin on the flight.

Yours sincerely,
